

```
In [2]: import pandas as pd

# Create data
data = [5, None, 15, 25, None, 35, 45]

# Create Series
s = pd.Series(data)

# Step 1: Fill missing values with median
s1 = s.fillna(s.median())
print("After filling missing values (median):\n", s1)

# Step 2: Filter values greater than 20
s2 = s1[s1 > 20]
print("\nValues > 20:\n", s2)

# Step 3: Sort in descending order
s3 = s2.sort_values(ascending=False)
print("\nSorted in descending order:\n", s3)

# Step 4: Reset index
s4 = s3.reset_index(drop=True)
print("\nAfter resetting index:\n", s4)
```

After filling missing values (median):

```
0      5.0
1     25.0
2     15.0
3     25.0
4     25.0
5     35.0
6     45.0
dtype: float64
```

Values > 20:

```
1     25.0
3     25.0
4     25.0
5     35.0
6     45.0
dtype: float64
```

Sorted in descending order:

```
6     45.0
5     35.0
1     25.0
4     25.0
3     25.0
dtype: float64
```

After resetting index:

```
0     45.0
1     35.0
2     25.0
3     25.0
4     25.0
dtype: float64
```
